Return Guide for **Diesel Fuel Injectors**

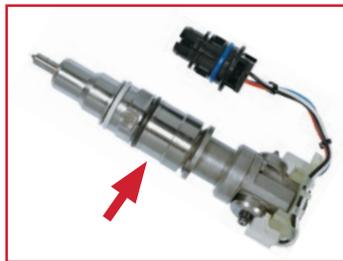

We know it can be difficult to determine if a return is valid. These simple tips will make it easier for you to decide what warranty claims are valid, and which are not.

ALWAYS Open the box and check the part

- Confirm the brand of the part in the box matches the brand on the box. Standard[®] Diesel Injectors will have “SMP” laser etched on the part (some applications may also say “Pure Power”).
- If a part is brand new and has never been installed, it can be returned for credit, but should not be processed as a warranty.
