ALWAYS Open the Box, Check the Part, and Verify the Return

Check the Part

- Inspect the part and look for evidence that the part could have been installed
- Inspect for oil, coolant, other signs of fluid contamination or an aged rusted core
- Verify the Integrity of the Unit: Ensure that no tampering or disassembly has occurred

Verify the Return

- Inspect for any brand specific markings or literature to verify you sold them the part
- * If applicable, look up the customer purchase database to review the warranty return record and to validate the return
- * If applicable, test the unit to validate performance and function
